**GENERAL INFORMATION:**

<b>Product Description:</b>	Remak™ Acoustic Wood
<b>Model Number:</b>	E32/6 600*1200*12mm
<b>Model Difference:</b>	N/A
<b>Brand Name:</b>	REMAK
<b>Applicant:</b>	Remak Construction and Interior Jsc Lot 14B, The auction, Le Duc Tho street, Tu Liem, Ha Noi, Vietnam
<b>Manufacturer:</b>	Remak Construction and Interior Jsc Lot 14B, The auction, Le Duc Tho street, Tu Liem, Ha Noi, Vietnam
<b>Report No.:</b>	ENC140217GZ61E1
<b>Test Methods:</b>	EN ISO 354:2003 Acoustics - Measurement of sound absorption in a reverberation room. The absorption class was determined in conformance with EN ISO 11654:1997
<b>Test Results:</b>	See next sheet
<b>Sample Receiving Date:</b>	Feb. 17, 2014
<b>Test Performing Date:</b>	Feb. 17, 2014 – Feb. 21, 2014

## Annex 2: Mounting of specimen

The specimen was mounted in the reverberation room in conformance with EN ISO 354:2003 Annex B.

### Annex 3: Measurement arrangements

#### 1. Acoustical measurements

The test signal was produced to the test room using three fixed omnidirectional loudspeakers (6 x Seas B&K2260D). The test signal (pink noise) was produced by a real time analyzer (Bruel & Kjaer 2133) and amplified with terminal amplifier (B&K2716). The sound pressure level in the reverberation room was measured with a condenser microphone on a tripod (B&K 5821 equipped with a pre-amplifier B&K4296).

The reverberation time at third-octave bands was measured with the real time analyzer (B&K4189) using 20 dB decay range. All frequency bands were measured using 2 sources simultaneously and 4 microphone locations. In every location an ensemble average of 10 decays was measured. The total number of reverberation time measurements was 8.

The acoustical measurement equipment fulfilled the following IEC standards and grades of accuracy:

IEC 651	Sound level meters	type 1
IEC 804	Integrating sound level meters	type 1
IEC 1260	Octave-band and fractional-octave-band filters	class 1
IEC 942	Sound level calibrators	class 1

#### 2. Other measurements

The temperature and the relative humidity of the measurement rooms were measured with a psykrometer (Casella London 7165). The ambient atmospheric pressure was measured with a barometer (B&K MD0001). The specimen was weighed with a 150 kg precision weighing machine (PM 150). The dimensions of the specimen were measured with a roll meter (K-Prof).

#### 3. The test room

The reverberation room was equipped with six fixed diffuser panels. The positions were selected randomly in respect with altitude, angle and position. The amount of diffusers and their arrangement fulfills the requirements of Annex A in ISO 354. The reverberation time of the reverberation room fulfills the requirements of EN ISO 354 for 155 m<sup>3</sup> test room.
